

Fat Spaniel Technologies and REGEN Energy Join To Deliver Responsible Energy™ Solutions

Companies Unveil Collaboration at GreenNet '09 Conference

SAN FRANCISCO, Calif., March 24, 2009 – Fat Spaniel Technologies, Inc., a provider of monitoring and reporting services for renewable energy systems, announced a marketing and development partnership with REGEN Energy™, a Canadian provider of swarm logic-based EnviroGrid™ wireless energy management systems. REGEN Energy has joined Fat Spaniel's Insight Platform™ Developer Program to deliver integrated renewable energy monitoring and control solutions. Fat Spaniel and REGEN Energy share a vision of a world where efficient energy solutions and renewable energy systems enable responsible energy production and usage.

“The combination of Insight Platform and EnviroGrid will provide customers with the ability to both closely monitor their renewable energy generation and flexibly manage key electric loads including HVAC, lighting and cold storage to reduce peak demand during periods of reduced renewable energy production. In addition, EnviroGrid also allows customers to maximize energy efficiency and to participate in Demand Response programs,” said Mark Kerbel, President and CEO of REGEN Energy. “Together we will help customers be both responsible and responsive in their energy generation and usage.”

“Industry partnerships are vital to achieving what we call ‘Responsible Energy,’” says Tom Tansy, acting Vice President of Marketing, Fat Spaniel Technologies. “REGEN Energy is widely recognized as one of the leading innovators of electric demand management technology, and we believe that this technology has the potential to reduce peak electrical demand in commercial, industrial, and institutional settings by up to 25%. Fat Spaniel customers will be able to generate a much greater portion of their total energy demands from renewable energy and take full credit for the environmental impact of the solution. We are excited to bring together our mutual industry experience and solution design expertise to introduce high-return energy management solutions that help solve these global challenges.”

About REGEN Energy

REGEN Energy develops and markets the EnviroGrid wireless energy management system to customers throughout North America. EnviroGrid's unique swarm logic-based architecture combines the natural distributed intelligence, simplicity and flexibility found in bee hives and ant colonies with automated, web-based monitoring and control services to dramatically simplify the cost and complexity of energy management. EnviroGrid minimizes peak demand by smoothing concurrent loads without sacrificing occupant comfort, reduces energy usage by identifying equipment operating outside of expected conditions, and enables companies to easily participate in utility-led Demand Response programs to relieve grid stress and receive financial incentives. REGEN Energy also licenses its patent-pending swarm logic technology to leading OEMs and Systems Integrators worldwide. REGEN Energy (www.regenenergy.com) is based in Toronto, Ontario, Canada.

About Fat Spaniel Technologies, Inc.

Based in San Jose, California, Fat Spaniel Technologies, Inc. is the leading independent provider of critical monitoring and reporting services to the renewable energy industry. Solar power producers, financiers, system integrators, and OEMs take advantage of Fat Spaniel’s Internet-based software service to increase energy output, reduce operations and maintenance costs, contain risk, and increase the return on investment of renewable energy projects. Fat Spaniel is a trusted third-party monitoring service provider that enables remote plant diagnostics and maintenance; revenue-grade data for billing, REC trading, and performance-based incentive collection; and a compelling platform for energy visualization. Fat Spaniel solutions are deployed in 20 countries and over 2,200 locations across the globe. With our partners and customers, we share the vision of a world where renewable energy is the first and best energy source. For more information, go to www.fatspaniel.com.
